

Abel Levran, S.Kom

Kab Tangerang, Banten | abellevrann@gmail.com | +6281378927443 | [Portfolio Website](#)

Personality

Enthusiastic and highly motivated fresh graduate in Informatics with specialized hands-on experience in mobility data analytics, GIS-based spatial mapping, and isochrone modeling. Proven track record in processing large-scale geospatial datasets 400,000+ UAE traffic rows to build interactive HTML-based isochrone polygon maps for logistics and urban planning applications. Experienced in end-to-end data science pipelines from web scraping and text preprocessing TF-IDF to implementing comparative machine learning models (SVM, KNN, Naive Bayes) for sentiment classification. Proficient in Python (Pandas, Scikit-learn, Matplotlib), SQL, and Excel to extract actionable business insights from complex datasets. Combines strong analytical thinking with excellent collaboration skills to deliver data-driven solutions that solve real-world operational challenges.

Education

Padang State University
Bachelor's Degree, Informatics, 3.75/4.00

Padang, ID
2021 - 2025

Internship Experiences

PT PLN (Persero) UIW Sumbar
IT Intern, Operational STI

Padang, ID
Sep 2024 – Nov 2024

- Design and develop mobile responsive applications using Google AppSheet with cloud native architecture.
- Integrate multi platform data storage Google Sheets to ensure real time synchronization.
- Implement multimedia features for visual documentation with an integrated photo upload system. Build analytics dashboards for real time monitoring of meter damage status and trends.
- Conducting quality inspections and audits on approximately $\pm 17,000$ electricity meters in warehouse facilities, ensuring that company operational standards are met.
- Implementing a meter classification system based on operational conditions (serviceable vs. needing replacement)
- Creating electricity meter reports based on operational conditions to improve inventory management efficiency.

Project Based Learning

Isochrone Map for Traffic (UAE) Mobility Data

May 2026

- Developing a geospatial analysis tool that transforms raw traffic data into interactive isochrone maps, enabling users to visualize travel-time coverage from a chosen origin point
- Processing 400,000+ road segments from a UAE sample dataset: extracting geometry, constructing a NetworkX graph weighted by travel time (distance $\div$ speed), and applying Dijkstra's algorithm to identify all accessible nodes within 5, 10, 20, and 30 minutes.
- Generating convex hull polygons and a color-coded interactive HTML map (green/yellow/orange/red) using Folium, GeoPandas, Shapely, and PyProj; delivering clear insights for logistics planning, service area evaluation, and accessibility assessment.

DeepSentiment Web App

June 2026

- Developed a full-stack AI-based web application named DeepSentiment for sentiment analysis of DeepSeek app user reviews, accurately classifying text into Positive or Negative categories.
- Built a backend API using FastAPI with a custom-trained Linear Support Vector Machine model, supported by TF-IDF text representation, as well as natural language preprocessing using NLTK and slang word normalization to improve prediction accuracy on non-standard text.
- Designed a responsive static frontend using HTML, CSS and Vanilla JavaScript, connecting it to two analysis modes: Single Prediction real-time and Batch Prediction uploading .csv files to process hundreds of reviews at once with downloadable results.
- Provided an interactive Statistics Dashboard to visualize sentiment distribution from the training data, and implemented a Prediction History feature stored locally in the user's browser for easy tracking.

Data Professional Salary Analysis (Kaggle Dataset)

June 2026

- Analyzed global salary trends for data-related roles (Data Scientist, Data Analyst, Data Engineer) from 2020 to 2022 to identify key factors influencing compensation, such as experience level, geographic location, and work model.
- Processed and cleaned the dataset, and conducted in-depth exploratory data analysis to answer key business questions regarding the most popular roles, salary comparisons between positions, and the impact of location and work models on compensation.
- Visualized findings, generating strategic insights such as the market demand dominance for Data Scientist and Data Engineer positions, as well as a strong linear correlation between experience level Entry, Mid, Senior, Executive and salary increases.
- Full Remote workers at Entry and Mid levels had higher median salaries than On-site workers, while the Hybrid model consistently offered the lowest compensation across almost all experience levels.

Analyzing Profitability for E-Commerce Sales(Kaggle Dataset)

May 2026

- Processed and visualized the data using TIBCO Spotfire by creating an interactive dashboard displaying total sales, total profit (\$286,397), and total quantity (37,873 units).
- Discovered that discounts above 70% lead to negative profit margins as low as -280%, while discounts of 0–20% yield positive margins up to 60%, using scatter plots and trend lines in Spotfire.
- Mapped profit margins by region (West 16%, East, South, Central 14% each) using map and bar chart visualizations in Spotfire, and provided recommendations for targeted discount strategies and ship mode optimization.
- Identified that Same Day & Second Class ship modes have the highest profit margin (14%) but also 14% discount. Standard Class generates the largest absolute profit (\$706,146) with a 10.8% margin and 10% discount

Sentiment Analysis of DeepSeek App Reviews

Feb 2025

- Developing a machine learning based sentiment analysis system to classify DeepSeek app user reviews into positive and negative categories. Implementing an end to end pipeline from data collection, preprocessing, feature engineering, to model evaluation.
- Conducting a comparative study of the performance of three main classification algorithms: SVM, K-NN, and Naive Bayes.

Organizational Experiences

Student Association (HIMANIKA)

Padang, ID

Staff - Student-owned business (BUMM)

May 2023 – August 2023

- looking for a vendor to make PDH shirts.
- Set up a stand to sell souvenir chips during graduation
- Set sell iced tea during the electronics cup futsal tournament.

Certification

• **HCIA-AI V3.5 0 - HUAWEI TALENT**

Dec 2024

• **MikroTik Certified Network Associate (MTCNA) - MikroTik**

Jun 2023 – Jun 2026

SKILLS

Language: Indonesian - Native, English - Intermediate

Soft Skill: Communication & Team Collaboration, Adaptability & Fast Learning, Hardworking and Dedicated, Critical Thinking.

Hard Skill: Python, Jupyter Notebook, TIBCO Spotfire, HTML, CSS, JavaScript, C++, Node.JS, MySQL, PostgreSQL(basic), MongoDB, Data Scraping, Data Analysis, Data Modeling, Data Visualization, Machine Learning
